Claims

- 1. A rolling fluid machine especially with a liquid spraying at the output, comprising a chamber (1) where at least a part of its inner surface has a rotary shape and the chamber (1) is provided with at least one inlet (2) of fluid and at least one outlet (3) of fluid, while in the chamber (1) a rolling rotor (4) is installed in a manner enabling rolling and swinging, **characterized by the fact** that in the chamber (1) the space (5) bellow the rotor (4) and the space (6) above the rotor (4) is interconnected by at least one additional channel (7).
- 2. The rolling fluid machine as in Claim 1, wherein the additional channel (7) comprises an opening trough the wall of the rotor (4).
- 3. The rolling fluid machine as in Claim 1, wherein the additional channel (7) is arranged outside the inner space of the chamber (1).
- 4. The rolling fluid machine as in any of the above Claims 1 to 3, wherein the additional channel (7) has incorporated a control valve (8).
- 5. The rolling fluid machine as in Claim 2, wherein the additional channel (7) is connected to the hollow shaft (9).
